1 **I. INTRODUCTION**

2 Agilent is entitled to a preliminary injunction at least as to Synthego's offers for sale and  
3 sale of products for diagnostic, therapeutic, and other commercial applications; and use at or by  
4 Synthego, as set forth in Exhibit A hereto.<sup>1</sup> An injunction of this scope, which carves out safe  
5 harbor exempt sales and sales restricted to Research Use Only, will maintain the status quo while  
6 having no impact on Synthego or the public interest, and is amply justified in the record.

7 All of Synthego's modified guide RNA products infringe the asserted patents. Synthego  
8 has long known that the success of its guide RNA products is due to its use of what it  
9 proclaimed—until this case—to be Agilent's "landmark" innovations, which it admits it copied  
10 from the Hendel paper. It has now admitted that its Chief Scientist [REDACTED]  
11 [REDACTED]

12 Tellingly, even when confronted with an expert declaration establishing its infringement and the  
13 possibility of being enjoined, Synthego does not contest infringement even though Synthego  
14 invoked the jurisdiction of this Court solely under the pretense that it did not infringe. Dkt. 1.

15 Synthego's declaratory judgment complaint also alleges that all its infringing activities fall  
16 under the safe harbor exemption because they are being used for FDA approval. *Id.* ¶¶ 21, 25.  
17 But Synthego now argues against its own complaint; it contends that most of its sales—its  
18 Research Use Only ("RUO") products—can only be used for research and cannot be used for pre-  
19 clinical or clinical trials. Dkt. 76-1 ¶¶ 5-7, 17-18. Synthego also concedes that GMP products that  
20 will be used in pharmaceutical and therapeutic products are not subject the safe harbor either. And  
21 even as to the subset of products that could conceivably be being used for FDA approval,  
22 Synthego failed to come forward with any evidence that a single product is.

23 Agilent and Synthego are head-to-head competitors in the GMP market. *E.g.*, Ex. 54 at  
24 592 (Agilent is a [REDACTED] Ex. 55 at 2. Synthego's opposition also

25 <sup>1</sup> Synthego contends that commercial use of its products for therapeutics is, at best, several years  
26 away, and in any event, that its potential customers in this space all have second sources. Dkt. 76-  
27 28 ¶ 15. Thus, as long as the injunction entered here carves out any uses that Synthego can  
28 actually establish to be related to FDA-approval as well as sales restricted to Research Use Only,  
which were the only sales Agilent offered to license, Synthego will not be harmed, nor will the  
public interest be impacted if the status quo is maintained.

1 establishes that Synthego and Agilent are the only two companies that compete in all three  
2 identified market segments. Critically, while Synthego notes that others sell guides for roughly  
3 the same price as Synthego now, Synthego does not dispute that it drove the down the market, nor  
4 can it. Documents it produced evidence its aggressive pricing strategy untethered to its actual  
5 costs. In fact, as of February, Synthego had already spent its first \$300M in funding but had only  
6 realized [REDACTED] in annual sales. Synthego was able to focus on manufacturing because, by its own  
7 admission it did not “innovate on the chemistry.” Instead, it admits its products incorporate the  
8 innovations of others. Synthego attempts to excuse its willful infringement by claiming that it  
9 should not have to pay Agilent because others pioneered these inventions before Agilent, [REDACTED]  
10 [REDACTED] Synthego set out to capture (and forever change) the market at  
11 all costs without regard to the intellectual property of others; the ongoing impact of its actions are  
12 difficult to quantify, and weigh heavily in favor of maintaining the status quo.

13 Admittedly, two questions remain: inequitable conduct and validity. As to inequitable  
14 conduct, Synthego’s claims should be dismissed with prejudice. Synthego has now deposed the  
15 first-named inventor of the patents-in-suit, but cannot, as a matter of undisputed fact and law,  
16 muster a scintilla of evidence that anyone at Agilent had any intent to deceive the Patent Office,  
17 which is necessary to maintain the claim under *Therasense*.

18 As to invalidity, the law is clear: an institution decision does not by itself raise a  
19 substantial new question of patentability for purposes preliminary injunction proceedings. But in  
20 any event, Synthego invoked this Court’s jurisdiction and invalidity can and should be decided in  
21 this Court on the expedited schedule already set by this Court, which is set to resolve the entire  
22 case before either Final Written Decision even issues. Dkt. 51. The PTAB institution decisions  
23 themselves establish that this case presents complicated and novel issues that are much more  
24 appropriately addressed in this Court where a more fulsome record can be developed, which even  
25 the PTAB conceded is needed. Dkt. 77-1 at 29, 31. Synthego itself argues that discovery in this  
26 case (and beyond what is permitted in the PTAB) is critical to a determination of the validity  
27 issues. Rather than request additional discovery in the PTAB where it knows that any discovery  
28 beyond the deposition of a competing expert will be denied, Synthego is using the proceeding in

1 this Court to obtain that evidence, and has filed a separate motion to attempt to secure its ability to  
 2 do so. Dkt. 83 at 1, 4-5; Opp. at 5-6. As a matter of fundamental fairness, Agilent should have the  
 3 same opportunity to obtain discovery beyond what the PTAB allows. Separately, the institution  
 4 decision expresses great skepticism about several dependent claims that are implicated in this case,  
 5 and thus, the PTAB proceedings are unlikely to fully resolve this matter anyhow.

6 Thus, the Court should enter the requested preliminary injunction and maintain the status  
 7 quo while it resolves this case on the schedule it has already set, which provides that all fact and  
 8 expert discovery will be complete and dispositive motions will be briefed by January 6, 2023. In  
 9 contrast, Final Written Decisions are not due until late May 2023, and are unlikely to resolve all  
 10 issues in this case.

## 11 **II. ARGUMENT**

### 12 **A. Agilent is likely to succeed on the merits.**

#### 13 **1. Likelihood of success as to infringement weighs heavily in favor of** 14 **maintaining the status quo.**

15 Agilent established that Synthego infringes claims 1-5, 8, and 16 of the '034 Patent and  
 16 claims 1-3, 6, 9, 21-22, 25, and 27-30 of the '001 Patent. Dkt. 40 at 14-16. Beyond documenting  
 17 infringement relating to Synthego's CRISPR Revolution products (Dkt. 42 ¶¶ 72-148), which  
 18 include modified guide RNA, Agilent's infringement proof included evidence that all of  
 19 Synthego's Eclipse-Platform products, including Synthego's engineered cells, use the patented  
 20 inventions (e.g., Dkt. 42 ¶¶ 2, 72(k), 72(l), 72(n), 72(o), 72(p), 72(q), 72(r), 73). Synthego does  
 21 not dispute that any of these Accused Products practice each and every element of the asserted  
 22 patent claims.

23 Synthego likewise does not dispute that many of the Accused Products fall entirely outside  
 24 of the safe harbor protections. The safe harbor exemption applies in the context of FDA approval.  
 25 But Synthego agrees that once FDA approval is obtained, the safe harbor no longer applies. Thus,  
 26 commercial sales of approved therapeutics and diagnostics fall outside the scope of the safe  
 27 harbor. As to RUO, notwithstanding its allegation in its declaratory judgment complaint,  
 28 Synthego now makes no argument that these uses fall in the safe harbor exemption. Opp. at 10-

11. And as to Synthego’s own use and Eclipse platform, Synthego likewise makes no argument. As to its so-called GMP-like and GMP products, Synthego points to alleged “terms of sale” which mirror some of the language of Section 271(e)(1), but has offered no evidence that any customer has actually accepted those terms and conditions. In fact, the only signed orders and agreements that Synthego provided do not contain those terms that Synthego argues give rise to safe harbor protection. Opp. at 11-12 (citing Nowatzke Decl. ¶¶ 13, 23, 26, 33, 34); *but see* Ex. J ¶ 23, Exs. P “terms” omitted), K (omitted), L (omitted), M (omitted), N (omitted), O (omitted), R (omitted), U (omitted), X (omitted), Y (omitted), Z (omitted). In any event, a signed agreement with the term Synthego cites would merely mean that the customer could potentially use the product for a regulatory approval purpose; it would not be proof that they do.<sup>2</sup> *Amgen Inc. v. Hospira, Inc.*, 944 F.3d 1327, 1338-39 (Fed. Cir. 2019) (accused infringer bears the burden of proving each activity falls within the safe harbor exemption).

Synthego failed to demonstrate the “substantial merit” required to rebut Agilent’s showing of likelihood of success on the merits. *Titan Tire Corp. v. The Goodyear Tire & Rubber Co.*, 566 F.3d 1372, 1377 (Fed. Cir. 2009) (internal citation omitted).

**2. This case should maintain the status quo while deciding validity and all other issues on the schedule it has already set.**

Institution of IPR proceedings does not establish that substantial questions exist as to the Asserted Patents’ validity, “[u]nless and until a patent claim is canceled by a final decision, it is valid and enforceable during the pendency of a [reexamination] proceeding.” *Aevoe Corp. v. AE Tech Co., Ltd.*, No. 2:12-cv-00053-GMN-NJK, 2014 WL 1089676, at \*3 (D. Nev. Mar. 18, 2014) (denying motion to dissolve a PI despite final rejection of the claims in reexamination) (*citing Fresenius USA, Inc. v. Baxter Int’l, Inc. (Fresenius II)*, 721 F.3d 1330, 1344-46 (Fed. Cir. 2013) (reexamination decisions are not ‘final’ until the patent owner has exhausted all avenues on appeal)). In fact, the PTAB’s institution decisions do not by themselves raise a substantial new question of validity for preliminary injunction purposes. *See, e.g., Tinnus Enter., LLC v.*

---

<sup>2</sup> Ms. Nowatzke declares that Synthego has this evidence (Dkt. 76-1, Nowatzke Decl. ¶ 13, 26. Thus, Synthego could have produced this evidence if it was in fact helpful to its cause.

1 *Telebrands Corp.*, 846 F.3d 1190, 1202 n.7 (Fed. Cir. 2017) (affirming PI and ruling that accused  
 2 infringer had not raised a substantial question as to invalidity based on institution decision even  
 3 where FWD rejecting claims issued during pendency of the appeal). This makes sense, because,  
 4 as Federal Circuit explained, “the Board is not bound by any findings made in its Institution  
 5 Decision” because “[a]t that point, the Board is considering the matter preliminarily without the  
 6 benefit of the full record.” *Trivascular, Inc. v. Samuels*, 812 F.3d 1056, 1068 (Fed. Cir. 2016).  
 7 The USPTO’s own statistics help explain why this is the law. As of May 2022, eighty-two (82)  
 8 percent of all IPR petitions in the bio/pharma field are instituted. *See* PTAB Trial Statistics, May  
 9 2022 IPR and PGR, at 9.<sup>3</sup> Whereas only seventeen (17) percent of all challenged patents result in  
 10 a final written decision of unpatentability as to all claims. *See* PTAB Statistics, FY21 End of Year  
 11 Outcome Roundup IPR, PGR, CBM at 12.<sup>4</sup>

12 Here, in light of “the unpredictability of the effects of RNA modifications on various RNA  
 13 or oligonucleotide types,” the PTAB “expressed skepticism” regarding Synthego’s showing of  
 14 obviousness for various dependent claims of the ’034 Patent, “e.g., claims 5-13 and 20-28,” and  
 15 claims 14 and 29 (“ground six”) (Dkt. 77-1 at 31), as well as “claims 8, 9, 11, 16, 18, 19, 25, and  
 16 26” of the ’001 Patent. (Dkt. 77-2 at 30-31). While it is true that not all of these claims are at  
 17 issue in this preliminary injunction proceeding, there is compelling evidence that this is only  
 18 because Agilent’s proof of infringement as of the time it filed its injunction motion was based  
 19 solely on publicly available information. Since that time, Agilent has, for example, learned that  
 20 claim 14 of the ’034 Patent, is in fact practiced by Synthego. De Mory Decl., Ex. 56 at 1774  
 21 (showing [REDACTED]  
 22 [REDACTED]).

23 And it is likely that more claims would have been added already but for Synthego’s  
 24 ongoing improper discovery tactics. The various dependent claims at issue in this case cover  
 25 different modifications. Yet, Synthego has systematically obstructed inquiry into both the nature  
 26

27 <sup>3</sup> At [https://www.uspto.gov/sites/default/files/documents/ptab\\_aia\\_20220531\\_.pdf](https://www.uspto.gov/sites/default/files/documents/ptab_aia_20220531_.pdf).

28 <sup>4</sup> At [https://www.uspto.gov/sites/default/files/documents/ptab\\_aia\\_fy2021\\_\\_roundup.pdf](https://www.uspto.gov/sites/default/files/documents/ptab_aia_fy2021__roundup.pdf)

1 and locations of modifications associated with its actual sales,<sup>5</sup> by redacting that information from  
 2 all its production documents. Ex. 74 (SYNTHEGO-AGI00004065-4079) is instructive:

3  
 4  
 5  
 6  
 7  
 8  
 9  
 10  
 11 To be clear, Synthego applied them to each and every document *as produced in discovery*. While  
 12 Synthego finally unredacted certain information from exhibits to the Nowatzke Declaration earlier  
 13 today,<sup>6</sup> Agilent has been asking for fulsome information about modifications and unredaction  
 14 since May 4. De Mory Decl., Exs. 66-69. This obfuscation is not permitted under the Federal  
 15 Rules of Civil Procedure. *Live Nation Merch., Inc. v. Miller*, No. 13-CV-03936 CW (NC), 2014  
 16 WL 1877912, at \*3 (N.D. Cal. May 9, 2014) (ordering reproduction of unredacted version of  
 17 documents). If the information that Synthego redacted (or otherwise failed to produce) implicate  
 18 claims that the PTAB has already found are not likely to be found invalid, this provides a further  
 19 compelling reason that Court should maintain the status quo while it resolves this case on the  
 20 schedule it has already set.

21 Separately, the PTAB's institution decisions provide strong support for proceeding in this  
 22 forum while maintaining the status quo even as to the claims which the PTAB indicated that "at  
 23 least facially" a prior art reference like Pioneer Hi-Bred (without any demonstration of operability)  
 24 "need not disclose test data to support its teaching that the modified crRNAs in Table 8 have the

25 \_\_\_\_\_  
 26 <sup>5</sup> Synthego has repeatedly pointed Agilent to a single document describing Synthego's  
 27 [REDACTED], which is also the only document it cited in its P.L.R. 3-4(a) disclosures.  
 28 Ex. 70 at 35 & Ex. 56. [REDACTED]

<sup>6</sup> See also Nowatzke Decl., Exs. H, K-O, U, X.

1 recited guide RNA functionality.” Dkt. 77-1 at 29; Dkt. 77-2 at 29. The PTAB indicated that a  
 2 more fulsome record will be required for consideration of the petitions. Dkt. 77-1 at 29 (noting  
 3 that “this case is still at a preliminary stage and the record is not fully developed”), 31 (discussing  
 4 need for further factual development on unpredictability); Dkt. 77-2 at 29, 31 (same).

5 Even as to the PTAB’s *Fintiv*-based conclusion that “the merits of Petitioner’s anticipation  
 6 ground appear to be particularly strong” for some claims, there are critical questions of law and  
 7 fact that Agilent raised but the PTAB failed to address: the level of unpredictability in this area of  
 8 the art and how such unpredictability impacts the determination of whether a prior art reference is  
 9 enabling for purposes of anticipation. Ex. 57 (’034 POPR) at 38-47; Ex. 58 (’001 POPR) at 39-  
 10 47; *see also In re Wands*, 858 F.2d 731 (Fed. Cir. 1988) (setting forth factual considerations,  
 11 including unpredictability of the art, to determine whether a person of ordinary skill in the art  
 12 would be able to practice the claimed invention without undue experimentation).

13 Synthego pointed to four proposed modification designs in its Petition from Table 8. The  
 14 PTAB acknowledges that Agilent demonstrated that these included non-functional designs. This  
 15 should have been enough. *See, e.g., Forest Labs., Inc. v. Ivax Pharms., Inc.*, 438 F. Supp. 2d. 479,  
 16 486-87 (“[F]ailures by those skilled in the art (having possession of the information disclosed by  
 17 the publication) are strong evidence that the disclosure of the publication was nonenabling.”)  
 18 (quoting *In re Donohue*, 766 F.2d 531, 533 (Fed. Cir. 1985)). But importantly, Table 8 includes  
 19 26 additional proposed modification designs. Agilent should have a full and fair opportunity to  
 20 explore, through third-party discovery or otherwise, whether any others remained functional.

21 To be enabling, a reference must “enable one of ordinary skill in the art to make the  
 22 invention without undue experimentation.” *Impax Labs., Inc. v. Aventis Pharms. Inc.*, 545 F.3d  
 23 1312, 1314 (Fed.Cir.2008). Determining enablement is a question of law based on underlying  
 24 factual determinations. *In re Morsa*, 803 F.3d 1374 (Fed. Cir. 2015). Here, these factual  
 25 questions warrant the complete and fulsome development of a factual record regarding  
 26 unpredictability in the art, and whether the alleged invention of Pioneer Hi-Bred does, as Agilent  
 27 contends, require undue experimentation. *Sanofi-Synthelabo v. Apotex, Inc.*, 550 F.3d 1075, 1085  
 28 (Fed. Cir. 2008) (holding that the district court correctly concluded prior art lacked enablement

1 where discovery of the method and combination of variables required was sufficiently uncertain  
2 and arduous as to require undue experimentation).

3 Even Synthego contends that a more fulsome record than will be available in the PTAB is  
4 needed. As Synthego knows, any discovery beyond deposing the opposing expert is disfavored in  
5 the PTAB. *See, e.g.*, 35 U.S.C. § 316(a)(5)(A) (“discovery shall be limited to [] the deposition of  
6 witnesses submitting affidavits or declarations and [] what is otherwise necessary in the interest of  
7 justice”); 37 C.F.R. § 42.51(b)(1)-(2). Thus, rather than ask the PTAB for additional discovery,  
8 which likely would be denied, Synthego is using this forum as an end-run around those rules.  
9 Synthego filed a separate motion in this Court for the sole purpose of being able to use the  
10 discovery it obtained in this case in the IPR proceedings even though the PTAB would never have  
11 allowed it to obtain this discovery. Dkt. 83 at 1, 4-5; Dkt. 74-3 at 5-6. Synthego’s insistence that  
12 *this Court’s* procedures are essential to determining these complicated issues underscores that *this*  
13 *Court* should decide them, and should do so on the expedited schedule that it already set.

### 14 **3. Synthego’s inequitable conduct defense should be dismissed.**

15 Agilent’s motion to dismiss details Synthego’s inability to sustain this defense. *See, e.g.*,  
16 Dkt. 27; Dkt. 62. Neither in its Opposition to that motion, nor in its Opposition to the instant  
17 motion, has Synthego offered any evidence that cures those fatal flaws. Indeed, Synthego’s IPRs  
18 and the Board decisions thereon further establish that Synthego cannot meet its legal burden to  
19 demonstrate “but-for materiality.” *Therasense, Inc. v. Becton, Dickinson and Co.*, 649 F.3d 1276,  
20 1291-92 (Fed. Cir. 2011). Neither Deleavey nor Eckstein could be “but-for material” such that the  
21 PTO would not have allowed a claim had it been aware of the undisclosed prior art. In fact,  
22 Eckstein is so immaterial that Synthego omitted this reference from any ground in its IPRs. And  
23 as shown above, the Board expressed “skepticism” for Synthego’s obviousness challenges which  
24 relied on Deleavey. Dkt. 77-1 at 31; Dkt. 77-2 at 30-31.

25 But even more critical, and fatal to Synthego’s position (that the alleged failure to disclose  
26 the cumulative Deleavey and Eckstein references notwithstanding the disclosure of some 240  
27 other ones, along with a manuscript in which those references were cited), the record establishes  
28 that Synthego cannot show “specific intent to deceive the PTO,” which is a prerequisite to

1 maintaining its claim. *Therasense*, 649 F.3d at 1290. Because such evidence “must be sufficient  
 2 to *require* a finding of deceitful intent in the light of all of the circumstances,” Synthego’s  
 3 citations to Dr. Ryan’s “I don’t know” responses cannot meet that burden as a matter of law. *Id.*  
 4 And Synthego’s recitation of select “facts” is disingenuous, bordering on misrepresentation.  
 5 Dr. Ryan testified that work leading to the Asserted Patents began in 2013, and that neither he nor  
 6 his co-inventors became aware of the Deleavey or Eckstein references during their research.  
 7 Ex. 59, Ryan Dep. Tr. at 28:24-29:3, 33:2-21 (consideration of prior art did not include Deleavey  
 8 or Eckstein). In fact, Dr. Ryan never conducted a comprehensive literature search (31:12-16), nor  
 9 was he required to do so. *E.g.*, *Frazier v. Roessel Cine Photo Tech, Inc.*, 417 F.3d 1230, 1238  
 10 (Fed. Cir. 2005). None of the inventors considered or used the Deleavey or Eckstein references in  
 11 the inventive process. Ex. 59 at 80:7-16. And there was never any consideration (much less any  
 12 decision) not to submit them during prosecution. *Id.* at 77:12-78:18, 80:18-21. Although those  
 13 review articles were identified while preparing a joint manuscript with researchers at Stanford  
 14 University (which was, itself, presented to the Patent Office), there is no basis to conclude (or  
 15 even suggest) any intent to withhold information or otherwise deceive the Patent Office. *See id.* at  
 16 73:18-75:9 (focused on submitting primary references to USPTO).

17 **B. Agilent has demonstrated a high likelihood of irreparable harm for which**  
 18 **there is no adequate remedy at law.**

19 Agilent has been irreparably harmed by Synthego’s sales and promotion of infringing  
 20 products and will continue to be harmed absent a preliminary injunction. Dkt. 40 at 21-24.  
 21 Indeed, Agilent is not only being forced to compete against Synthego’s products that incorporate  
 22 and infringe Agilent’s own patented technology, worse still, Synthego—Agilent’s only U.S.  
 23 competitor in the full-service gRNA market—promotes its successful poaching of Agilent’s  
 24 customers and key opinion leaders by undercutting Agilent’s prices and giving away infringing  
 25 products for free. Dkt. 40 at 21-22; Carter Decl. ¶¶ 11-13, 15; Dkt. 41-8 at 2-3. Synthego’s  
 26 conduct is especially egregious in a market with an explosive growth stage, and one in which  
 27 customers remain with the same supplier from their research needs through GMP-required stages.  
 28 Dkt. 40 at 22; Carter Decl. ¶¶ 10, 14; Ex. 64 at 68.

1 Synthego's opposition only confirms that Agilent will suffer irreparable harm absent an  
 2 injunction. First, although Synthego tries to downplay Agilent's role as a competitor in the RUO  
 3 modified gRNA market (Opp. at 18-19), that is not what it says on its website. In a 2019  
 4 interview, Synthego boasts about diverting Agilent RUO customers to Synthego with lower prices:

5 DD: ... I heard about Synthego about a year and a half ago. Kevin Holden got in  
 6 touch with Ayal Hendel, who was the first author in the Nature Biotech paper, about  
 7 being a supplier of these modified guides. **At that point, the only people we knew  
 8 who made them were Agilent, who we had the collaboration with. Kevin claimed  
 9 that Synthego could make synthetic modified sgRNAs at a smaller scale and  
 10 cheaper cost. . .**

11 JR: So, prior to Synthego, you were using Agilent?

12 DD: Yes...

13 Dkt. 41-8 at 3 (emphases added). In this interview with Dr. Daniel Dever, of Matthew Porteus'  
 14 laboratory at Stanford University, Synthego flouted not only that it had successfully lured away  
 15 the very type of research customer whose exploratory work in sickle cell disease may evolve to  
 16 GMP supply needs, but also targeted a laboratory of scientists known throughout the world for  
 17 cutting-edge CRISPR research—that is, key opinion leaders (“KOLs”) whose publications and  
 18 supply choices carry enormous influence in the market. *Id.* at 2-3; *see also* Carter Decl. ¶¶ 11-14.

19 Attracting and retaining these research customers is critical to retaining share in the GMP  
 20 market, which Synthego does not dispute. Carter Decl. ¶¶ 13-14. Synthego does not dispute that  
 21 “a customer who initially purchases its gRNAs from a supplier in one market (i.e., RUO, mid-  
 22 scale, or GMP) is highly likely to stay with that same supplier for all purchases of gRNAs in all  
 23 three markets.” *Id.* As the only “full-service” providers of gRNA – from research to GMP—  
 24 Agilent and Synthego are sole competitors in the domestic market.<sup>7</sup> Carter Decl., ¶¶ 17, 105.  
 25 Notably, Steiner offers no evidence to contradict that only Agilent and Synthego are in each

---

26 <sup>7</sup> Synthego does not dispute that Agilent and Synthego are the sole suppliers of modified gRNA  
 27 in every U.S. market segment – RUO, mid-scale (or GMP-like) and GMP—and thus are the only  
 28 U.S. competitors for “full-service” modified guide RNA across all stages of research to clinical  
 applications. Whereas Steiner offers opinions about “competitors” in the RUO and mid-scale  
 segments—combining both GMP-like and GMP as one category of competitors—Steiner fails to  
 distinguish between U.S. companies and those who operate outside the U.S. *See* Steiner Decl.  
 ¶ 10; *but see* Ex. 60 (Carter Dep. Tr.) at 17 (identifying Synthego and BioSpring as Agilent's  
 sole GMP competitors), 105:12 (BioSpring's GMP facilities are solely outside the U.S.).

1 segment in the United States. *Cf.* Steiner Decl. ¶ 10.

2 Synthego's only evidence about the purported lack of competition is that [REDACTED]

3 [REDACTED]  
4 Opp. at 19. But this makes sense from a practical perspective: researchers use a drop-down menu  
5 on Synthego's website to order their guide RNAs from Synthego at a price point of approximately  
6 \$100. It is not surprising that Mr. Steiner has not heard from these researchers about Agilent—or  
7 at all! But in any event [REDACTED] does not refute or undermine  
8 Agilent's evidence that Synthego has actively poached Agilent's research customers and KOLs by  
9 offering Agilent's patented technology at lower prices, as it proudly boasts on its website. *See,*  
10 *e.g.*, Dkt. 41-8 at 2-3.

11 "In a market where only two parties are directly competing, the potential harm in allowing  
12 the defendant to continue its infringing conduct is probably at its greatest." *Open Text SA v. Box,*  
13 *Inc.*, 36 F. Supp. 3d 885, 906 (N.D. Cal. 2014) (*citing i4i Ltd. Partnership v. Microsoft Corp.*, 598  
14 F.3d 831, 861 (Fed. Cir. 2010)). This is particularly compelling where, as here, that competitor's  
15 business strategy is to destroy the established pricing expectations—the very expectations on  
16 which Agilent's substantial investment was based. Synthego does not dispute that it drove down  
17 the market price for guide RNAs. Indeed, Synthego's Q2 2020 product roadmap brags that it

18 [REDACTED]. Ex. 61 at -487 ([REDACTED])

19 [REDACTED]  
20 [REDACTED]; *id.* at -484 [REDACTED] Ex. 62 at 21 (sales training emphasizing

21 [REDACTED] It did and does so to drastically disrupt a market created by others'

22 innovations; Synthego provided no response to an interrogatory seeking *Synthego's* research and  
23 development efforts to identify functional or effective gRNA modifications. Ex. 62 at 9-10 (Resp.  
24 to Interrog. 6). Synthego has burned through cash; over \$500M in funding, reaching a sales level  
25 of only around [REDACTED]. Steiner Decl. ¶ 19. Synthego's low pricing strategy was not the product of  
26 efficient manufacturing, but a strategy to disrupt the market through falsely low prices. On top of  
27 this, Synthego refuses to pay the people who developed the underlying technology; apart from  
28 refusing to meaningfully negotiate with Agilent, Synthego is not licensed by [REDACTED],

1 and provided no evidence that it paid any royalties to [REDACTED] (or others).<sup>8</sup> Synthego's  
 2 business model is critically damaging to the market and to established innovators like Agilent,  
 3 which weighs heavily in favor of maintaining the status quo.

4 Agilent's prior efforts to license do not mitigate Agilent's irreparable harm. Agilent has  
 5 never offered anything other than an RUO license to a company, like Synthego, whose business is  
 6 selling guide RNAs. Doing so has no impact on Agilent's ability to license pharmaceutical  
 7 companies once the therapeutics and diagnostics are approved. But if Synthego can continue to  
 8 drive down prices by refusing to license the intellectual property of companies like Agilent and  
 9 [REDACTED], who developed technology at issue, [REDACTED], who Synthego  
 10 claims developed some of the technology Agilent claims, the impacts will be irreparable.

11 An infringer like Synthego cannot build its business on the foundation of infringement, and  
 12 later be heard to rely on the success of that infringement to avoid an [REDACTED]  
 13 [REDACTED]  
 14 [REDACTED] Ex. 65 (6/8/2022 Resp. Rog. 3); *see, e.g., Broadcom Corp. v.*  
 15 *Qualcomm, Inc.*, 533 F.3d 683, 704 (Fed. Cir. 2008) (an infringer "should not be permitted to  
 16 prevail on a theory that successful exploitation of infringing technology shields a party from  
 17 injunctive relief."). Likewise, the potential for a compulsory license does not mitigate that harm.  
 18 *Cummins-Allison Corp. v. SBM Co., Ltd.*, 669 F. Supp.2d 774 (E.D. Tex. 2009) ("Some amount of  
 19 money could be calculated for any interference with property rights; that does not necessarily  
 20 make the amount an adequate legal remedy.").

21 With knowledge that [REDACTED], Synthego was busy scaling up its  
 22 manufacture of Agilent's inventions, giving away free samples, and luring Agilent's customers  
 23 and KOLs away by promising to provide these patented inventions at a lower cost. As Synthego  
 24 planned, by attracting and obtaining RUO customers, Synthego could use the stickiness of the  
 25 market to acquire customers needing large-scale and GMP grade modified gRNA. *E.g.*, Ex. 64 at  
 26 69 ([REDACTED])

27  
 28 <sup>8</sup> In spite of Patent Local Rule 3-4 and discovery requests served in February, [REDACTED]  
 [REDACTED]

1 [REDACTED] That business model fits squarely within the definition of irreparable  
 2 harm.<sup>9</sup> *Polymer Techs., Inc. v. Bridwell*, 103 F.3d 970, 976 (Fed. Cir. 1996); *See Abbott Lab'ys v.*  
 3 *Sandoz, Inc.*, 544 F.3d 1341, 1362 (Fed. Cir. 2008) (affirming preliminary injunction; “added  
 4 erosion of markets, customers, and prices, is rarely reversible”).

5       Uncertainty about the marketplace also weighs in favor of injunctive relief. Synthego cites  
 6 to Mr. Carter’s testimony to imply that the harm to Agilent would be speculative. *E.g.*, Opp. at  
 7 18-21. But Mr. Carter’s testimony supports injunctive relief because there is so much uncertainty.  
 8 The market is very secretive and little is known about the actions of possible competitors. Thus,  
 9 neither Agilent nor other participants or even third-party market analysts know (and cannot readily  
 10 ascertain) information about marketshare or competitors’ activities. *E.g.*, Ex. 60 (Carter Dep. Tr.)  
 11 at 15:25-17:5 (pre-clinical and GMP agreements are confidential, there is limited information from  
 12 “companies that have made public statements”); 26:3-17 (no reliable market share break-down in  
 13 pre-clinical areas); 121:19-122:3.<sup>10</sup> Such uncertainty is well-recognized as a basis to *grant*  
 14 injunctive relief, as preventing the harm outright avoids concerns associated with merely  
 15 approximating damages or uncertainty regarding the precision necessary to support a damages  
 16 analysis. *See Hybritech Inc v. Abbott Lab'ys*, No. CV-86-7461-AK(PX), 1987 WL 123997, at \*20  
 17 (C.D. Cal. July 14, 1987) (Kozinski, J.) (granting preliminary injunction, noting unpredictability  
 18 and difficulty in determining damages in a developing field), *aff'd*, 849 F.2d 1446 (Fed. Cir.  
 19 1988); *see also Boyce's Ex'rs v. Grundy*, 28 U.S. (3 Pet.) 210, 214 (1830) (“It is not enough that  
 20 there is a remedy at law; it must be plain and adequate, or, in other words, as practical and  
 21 efficient to the ends of justice and its prompt administration as the remedy in equity.”); *Flying*  
 22 *Cross Check, L.L.C. v. Cent. Hockey League, Inc.*, 153 F. Supp. 2d 1253, 1259 (D. Kan. 2001).

23       **C. The balance of hardships favors injunctive relief.**

24       Entering an injunction as requested is appropriate to preserve the status quo pending a final

25  
 26 <sup>9</sup> Agilent’s “late” entry to the market and its modest market share in RUO and mid-scale sales  
 (Opp. at 1) are indicative of the irreparable harm Agilent continues to endure. *Hybritech Inc. v.*  
*Abbott Lab'ys*, 849 F.2d 1446, 1456 (Fed. Cir. 1988).

27 <sup>10</sup> Synthego’s counsel even assumed such uncertainty in his questioning: “Q. Now, with respect to  
 28 the GMP market sector, *given the confidentiality issues and the unreliable nature of the*  
*competitive intelligence*, do you have any idea what the market share is ...?” Ex. 60 (Carter Dep.  
 Tr.) at 23:6-13 (emphasis added).

1 determination on the merits. Given the highly secretive and competitive nature of the market,  
 2 preservation of the status quo and the existing market structure is particularly warranted, as  
 3 Agilent has far more to lose if an injunction is not entered—including through lost market share,  
 4 goodwill, and opportunities to engage directly with manufacturers of pharmaceutical products and  
 5 other commercial applications—than if the patents were to later be found unenforceable or invalid.  
 6 This is particularly true given that the requested injunction is limited to therapeutic and  
 7 commercial applications and Synthego’s own uses, and Synthego insists that no customers have  
 8 reached such a point and provided no evidence or information regarding its own uses.

9       Neither Agilent’s delay nor arguments in the *Waters* case precludes entry of an injunction  
 10 to preserve the status quo. The “delay” that Synthego identifies here corresponds to a brief period  
 11 encompassed by the outbreak of a global pandemic, Agilent’s involvement in co-pending  
 12 litigation, a period in which Synthego had yet to threaten the GMP and GMP-like markets, and a  
 13 period in which Agilent sought to achieve a business resolution by working directly with  
 14 Synthego. In no way was Agilent unreasonable in seeking relief here. Even so, the *Waters* case is  
 15 inapposite. In *Waters*, the plaintiff admitted that it held a 70-80% marketshare and that customers  
 16 were unlikely to change suppliers; its marketshare was unlikely to be affected. The Plaintiff chose  
 17 not to bring an infringement action against ProZyme, a direct competitor, from 2015 until late  
 18 2018. *Waters*, 410 F. Supp. 3d at 706. Even then, Waters did not sue ProZyme, but waited until it  
 19 was acquired by Agilent, and then sued Agilent. *Id.* at 707. The *Waters* delay was longer than  
 20 here and the court found that the requested injunction would not preserve the status quo, but would  
 21 instead seriously alter it: “Plaintiffs essentially ask the Court to alter the status quo – essentially  
 22 decreasing the InstantPC share to zero pending trial, even though Plaintiffs’ conduct suggests that  
 23 even up to 20-25% market share did not induce them to sue ProZyme prior to the acquisition.” *Id.*  
 24 at 717. On the other hand, Agilent’s requested injunction is limited in nature and seeks to preserve  
 25 the status quo—indeed, Synthego itself asserts that none of its customers have advanced to a stage  
 26 that would be affected by Agilent’s requested injunction.

27       **D. The public interest favors the requested injunctive relief.**

28       The public interest factor recognizes encouraging investment in novel applications and

1 drug development by enforcing patent rights. *See, e.g., Sanofi-Synthelabo v. Apotex, Inc.*, 470  
 2 F.3d 1368, 1384 (Fed. Cir. 2006); *Abbott*, 544 F.3d at 1362. “The patent laws promote this  
 3 progress by offering a right of exclusion for a limited period as an incentive to inventors to risk the  
 4 often enormous costs in terms of time, research, and development.” *Kewanee Oil Co. v. Bicron*  
 5 *Corp.*, 416 U.S. 470, 480 (1974). This strong public interest favors injunctive relief here.

6 Agilent’s requested injunction cannot and will not interrupt or interfere with any ongoing  
 7 or future clinical trials that may implicate the use of Agilent’s patented inventions. Synthego has  
 8 not identified any drugs, treatments, or other commercial applications that would be interrupted if  
 9 the requested injunction is entered—indeed, Synthego asserts that there are no such drugs,  
 10 therapeutics, or applications at this time. Thus, the countervailing public interest factors normally  
 11 considered by courts (e.g., *Sanofi*, 470 F.3d at 1384) are inapplicable here. To the contrary, entry  
 12 of a preliminary injunction would provide ample opportunity for Synthego’s customers to plan for  
 13 and avoid potential disruptions to their commercialization efforts. As Synthego readily admits,  
 14 most customers considering therapeutic or commercial applications already explore multiple  
 15 supply sources (Steiner Decl. ¶ 15), and thus an injunction against Synthego is unlikely to  
 16 meaningfully disrupt their operations. Moreover, to the extent that an entity strongly preferred the  
 17 use of Synthego’s infringing products and services, the drugmaker could secure a license from  
 18 Agilent with have-made rights allowing for continued use of Synthego as a supplier.

19 Finally, Synthego has not produced any documents that would suggest it is a [REDACTED]

20 [REDACTED]  
 21 [REDACTED] Synthego’s disregard for patent rights throughout the industry is  
 22 contrary to the strong public interest in enforcing patent rights, favoring entry of the injunction.

### 23 **III. CONCLUSION**

24 For the foregoing reasons, Agilent respectfully requests that the Court enter an injunction  
 25 in the form attached hereto as Exhibit A to maintain the status quo while the Court resolves all  
 26 remaining issues on the expedited schedule already set by the Court.
